

ISIS - Question #1140

Phocube does not support web=true

Dear ISIS team, I am using phocube to save some meta-data for later processing. The spiceinit works very nice now without kernels bogging my notebook drive, but what about phocube? As it requires SPICE as well, it requires this functionality to be put in as well? When is that coming, please?		
Best regards, Michael

Stuart will respond on the external board. We don't even know if phocube was attempted. phocube will not be modified to use web services

The following reply has been posted to the external board.

Michael,

The only application within ISIS that needs to use the SPICE service is "spiceinit". When using the "web=true" option, "spiceinit" attaches the necessary SPICE information to the cube. From then on out the camera models within ISIS use this attached SPICE. Thus "phocube" should run fine after running "spicinit" with "web=true". If it does not, please post a bug report on this forum, and we'll look into it.
